GENERAL VALVE DESCRIPTION

Czech Industrial Valve Manufacturer

The 2E-series double offset butterfly valves are industrial fittings intended for full opening or closing flow. They may be also used for a rough flow control. The valves are designed for operation with very hard industrial conditions demanding safety, reliability and minimum maintenance like for example:

- nuclear energy industry
- water treatment
- gas pipe-works
- chemical industry
- metallurgy (and heavy industry in general)
- pulp and paper-making industry
- shipbuilding industry
- oil and petrochemical industry
- heat recovery, steam heating
- processing hydrocarbons
- fuel storage in aviation industry

Basic properties

- double offset design
- eccentric disc position in the body, precise connection of the disc with the stem and pivot, exact shaft and pivot bearing in the slide bushings
- split sealed stem - bigger Kv
- high efficiency of opening and closing valve
- easy operation
- easy assembly and installation
- vacuum max. 0,01 bar abs. (version R-PTFE)
- standardized top flange according to ISO 5211 enabling mount various types of actuator (electric, pneumatic, hydraulic)
- ATEX certified for explosive atmosphere
- option: TA-Luft sealed valve - control stem is sealed with a special graphite gland

Advantages of double offset valves

- split stem - large flow zone
- higher Kv/Cv values
- lower pressure loss
- guaranteed tightness in both directions at nominal working pressure (RS version)
- sealing ring and seat come to contact only nearly after the valve is entirely shut
- low closing torque
- the seal guarantees perfect upper stem tightness
- water and air tightness
- actuator connection can be modified by means of a bracket or the stem can be extended if connected to special actuator types

Quality control

- ABO valve production facilities are certified in accordance with ISO 9001:2015 (14001, 18001) quality control standards
- tightness test procedures according to standards EN 12266-1, ISO 5208, ANSI/FCI 70-2, API598
- production in accordance with the Pressure Equipment Directive 2014/68/EU - Equipment operating under pressure (Category III, module H)
- all the ABO valve fittings are tested under the pressure of 110% work pressure according to relevant pressure standards
- the possibility of issuing a material certificate 3.1, 3.2 on the performance of a pressure test
- all the actuators are adjusted and tested while assembled
- all the certificates are downloadable from www.abovalve.com

Large flow zone

One piece design

ABO design

The stem seal with TA-LUFT certification
for perfect leakage of pollutants into the ambient air (upon request)

DESIGN ADVANTAGES

Czech Industrial Valve Manufacturer

Double offset

- the double offset design provides a safe function and tightness even after a sudden temperature or pressure change. It reduces seat wear and ensures perfect tightness. The first offset **(1)** shifts the axis of the rotation off the sealing surface and thus provides tightness between the seat and the sealing ring around the entire disc circumference. The second offset **(2)** moves the the axis of the disc rotation off the valve (pipeline) axis and thus releases the ring from the seat after a few degrees of opening movement. The reason of the second offset is to quickly relieve the seal from compression between the disc and the seat.
- the design extends the seal lifetime and the torques are lower. When shutting valve, the rotating movement is changed to the linear one and the disc is effectively pressed into the seal. The design also prevents undesirable agglomerating e. g. undissolved substances in the area of disc and seal contact.

Stem and seal (3)

3

- two-piece stem** - owing to the split stem the valve attains higher values of Kv/Cv and related low pressure loss. The pins exactly fall into the reamed holes
- adjusting seal according to the customers' requirements** - the seal can be tightened/loosened to the parameters prescribed by customers. Thus maximum tightness can be achieved around the stem and the actuation torque for low-pressure applications can be decreased.
- adjustable seal** - enables simple approach to and adjustment of the seal without dismantling the actuator
- stem assembly** - upper and lower bushings made from TP Igus provides high abrasion resistance and prolongs valve lifespan
- extended neck** - enables to insulate piping incl. the valve
- easy service and seal replacement** - easy assembly and replacement
- upper flange according to ISO 5211** - enables to directly install a manual handle or an actuator

Seal design

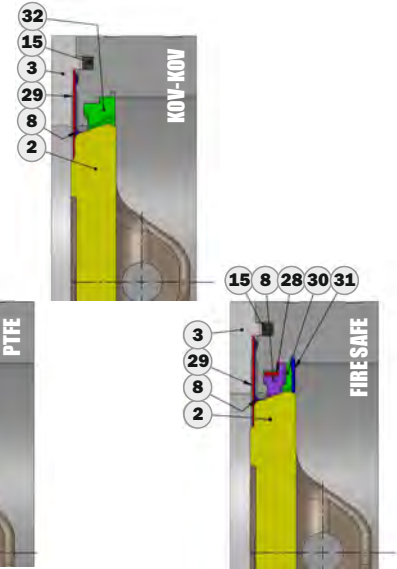

- R-PTFE** - suitable seal geometry ensures full tightness and a high number of cycles. The PTFE seal is reinforced with 25% glass fibres, reducing wear and increasing valve thermal stability. Longer lifespan of the valve and lower maintenance demand are guaranteed.
- end-stops** - are designed to avoid twisting the disc. Thus the seal is not damaged nor overloaded and the valve lifespan is extended. The version with R-PTFE up to DN125 has the end-stop in the body **(4)**, above DN125 a pressure flange **(5)** is used.

MATERIAL PERFORMANCE

VALVE ACTUATION

Czech Industrial Valve Manufacturer

All the ABO valves can be equipped with hand levers (up to DN150), worm gears, pneumatic and electric actuators. The upper flange design according to the standard ISO 5211 enables to directly assemble actuators on valves.

Handlever

For manual actuation ABO valve offers carbon steel lever suitably painted to improve resistance to corrosion and abrasion. Stainless lever on request. Top flange connection according to ISO standards F07 for DN50 to DN125 and F10 for DN150. Controlled lever on request. The levers can be equipped with a lock to ensure an optimized position, can be equipped with end position sensors.

Dimensions are mentioned in mm, weight in kg.
*) lever only for PS16 bar

Worm gear with handwheel

Manual gearbox casing is made from cast iron with suitable surface treatment and protection degree class IP 67. Self-locking design of the worm gear enables both to adjust basic positions open/shut and to control (throttle) media flow. The worm gearbox is simply actuated by means of a handwheel of a suitable diameter. End-limit positions of the worm gearbox are set by means of stop screws. The gearbox can be equipped with a lockable system secured by a padlock. Another way how to handle worm gearbox is using a chain. The worm gearbox as well as the hand lever can be completed with end-limit position sensors.

Actuators

Pneumatic actuators

Pneumatic actuators ABO Series 95 can be assembled to valves in two options: single-acting or double-acting.

Electric actuators

Electric drives ABO Series 97 are designed quarter-turn. Electric actuators can be installed on ABO valves for volta-ges of 24 V, 230 V or 400 V.

Special actuators types

Valves are equipped with special actuator types from major world suppliers (Auma, Regada, Valpes, etc.).

BIDIRECTIONAL TIGHTNESS / -RS- VERSION (DN50-DN600)

Czech Industrial Valve Manufacturer

Butterfly valves of 2E series (RS version) are delivered in nominal sizes of DN50 to DN600. Their make provides bidirectional tightness of the valve. On the circumference the valve is sealed with a special RTFE seal filled with 25% glass fibres and silicone filling.

Body material:

- carbon steel 1.0625 (A216 WCB) / 1.0425 (P265 GH)
- low carbon steel 1.1156 (A352 LCC) / 1.0566 (P355 NL1)
- stainless steel 1.4409 (CF3M) / 1.4401 (AISI 316)

Disc material:

- stainless steel DN50-DN125: stainless steel 1.4409 (ASTM A351 CF3M)
- DN150-DN600: stainless steel 1.4027 (ASTM CA-40)

Valve features

- bidirectional tight and control butterfly valve with all-stainless disc
- double offset design
- sizes DN50 to DN600
- tightness class A (EN 12266-1)
- better flow rate due to split stem
- the seat is adapted to large temperature changes
